

Website Audit Findings and Proposed Enhancements

High Priority Issues

1. Hero Section is Too Generic

Current headline:

Digital Systems That Scale. That Convert. That Automate. That Grow.

Better:

One Technology Partner for Enterprise Apps, AI, Fintech & Digital Growth

2. No Strong Social Proof

Mentioned

99+ Happy Clients

15+ Years Experience

But... have to modify the real-time client icons and number of clients

3. Product Showcase

The website says we build ERP, we build some dashboards... There will be high impact when we add the snapshots of those dashboards on the landing page, this will help to increase the weightage of the website

4. Navigation is overcrowded

Too many menu items.

Solutions

Services

Resources

Developer

Pricing

Login

About

Etc.

Dropdowns are huge.

Simplify.

5. The homepage repeats

IT Solutions

Enterprise Apps

Fintech

Digital Growth

multiple times.

Feels repetitive...

Compress them.

6. Long Scroll

The home page is very long.

After 5-6 sections users already understand the company.

Everything after that becomes repetitive.

7.Add Client logos in the website which helps audience feel trust

8. Leaders section

Current CTA: View Profile

Recommended: Visit Linkedin or some portfolio

9. Add Detailed case studies with measurable outcomes.

10.Create industry-specific landing pages instead of broad service summaries.

11. We can add move to top sticky scroll icon in the website to move to the top of the page from wherever needed.

Observed Website fixes:

Hover animation for this CTA is not better
also is not functional

In Home page we have added Digital Marketing but we are redirecting to Digital Services page.
So we can change that

Data, AI & Analytics page is not found

FAQ box openers are not aligned at a fixed position here in home page.

I have filled the form and submitted, In the URL the details of the contact form are noted. This may cause confidentiality issue for the audience who are filling the form.

This section is added when i fill this, it is redirecting to the contact us page. We can correct this or remove the entire section.

Social links in the footer are not functional

When i click om Enterprise Applications, the url should be as below:

Current: <https://quantiratechnologies.com/enterprise-application/>

Recommended:

Guides and Downloadable Whitepapers are not needed... which may affect SEO

Instead of Responsible Disclosure, we can add Privacy Policy and make that link functional

In this page we can add the dashboard of the product developed, if not possible atleast the logo of the product can be added.This applies for the all the services.

This page is not found when we move to services>development>View all digital services

In the services drop-down we can make this taglines below to camel case.This applies for all the drop-downs in the nav bar

Here site icon for our company logo is not a transparent png.. We can add a transparent png image whic suits for both the dark and light themes.

About us page is having the night blue colored hero where other pages have white.. Here the consistency is missing.

Also unwanted usage of various colors is found rather than brand colors in some areas specifically through out the website

.

Here we can directly mention Frequently Asked Questions in the capsule and delete Quantira Technologies FAQs otherwise remove that capsule because FAQs define Frequently Asked Questions then why do we need again to mention Frequently Asked FAQs. we can change that.

Questions Before working with Quantira is enough, we can remove ? there.

In about page we have arrows for FAQ openers but we have + in home page, we can maintain a consistent one among.

We can add the company's actual address here instead.

Instead of Explore the Quantira Blog, we can rewrite it as Explore Quantira Blogs or Explore our blogs.

The blogs page looks raw.. We can add some UI to it'

Got subscribed here in the blogs page. Will I receive blog notifications to my mail?

The images added here have a border radius and are cropped round at the edges. We can optimise the images and can add better images

Also it is recommended to add all the images in .webp format with clear alt text for better SEO.

Lexend - headings

Google sans - body

Anti design system - ui library
